# A. - METEOROLOGIA

## ANNOTAZIONI.

Le temperature medie sono calcolate con la formola: $\frac{t^8 + t^{max} + t^{min} + t^{21}}{4}$

La forza del vento è indicata secondo la scala:

0 - Calma - Velocità oraria . . . . . Km. 0-7
1 - Debole - » » . . . . . » 7-14
2 - Moderato - Velocità oraria . . . Km. 14-29
3 - Quasi forte - » » . . . . » 29-36
4. - Forte - Velocità oraria . . . Km. 36-50
5. - Tempesta - » » . . . . » 50-83
6. - Uragano - Velocità oraria . . . . . Km. 83-108 ed oltre.

Le osservazioni pluviometriche, espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono pioggia e neve fusa. — Le quantità di pioggia segnate in grassetto sono le massime giornaliere.

Nella colonna « strato di neve » viene segnata l'altezza dello strato nevoso sul suolo alla fine del mese.

Il segno (*) indica che mancano le osservazioni. Corrisponde al segno » adottato dal Servizio Idrografico Centrale e verrà adottato dall'Ufficio Idrografico del Po a partire dagli annali 1927.
