(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roaccorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncoferrente situato Km. 2,5 a monte.

(\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roccocorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Rocconcorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

di misura di portata

## ● Osservatorio

**IDROMETRIA.** — Gli elementi di osservazione sono dedotti dai diagrammi degli idrometrografi col criterio di indicare i vertici di alta e bassa marea quando questa si manifesta in modo sensibile, e negli altri casi i punti caratteristici del diagramma. Le altezze sono riferite per ogni stazione allo zero idrometrico, la cui quota sul livello medio del mare è indicata sotto il nome della stazione. I tempi sono segnati per ore intiere e mezz'ore.

Altezze idrometriche giornaliere

| Rami<br>del delta | Stazioni<br>e quote dello zero<br>sul medio mare | 1                             |                                  | 2                             |                                | 3                             |                                | 4                             |                                 | 5                             |                                 | 6                             |                                 | 7                              |                                  | 8                              |                                  | 9                             |                                 | 10                             |                                 | 11                              |                                  | 12                            |                               | 13                             |                                | 14                             |                                | 15                            |                                | 16                               |                               |

## c) GEOIDROLOGIA

---

### SEGNi CONVENZIONALI.

- » Mancano le osservazioni.
- [ ] Dato interpolato.
- ? Dato incerto.

### ANNOTAZIONI.

Le osservazioni ai pozzi vengono eseguite nove volte al mese nei giorni 2, 5, 8, 12, 15, 18, 22, 25, 28 ed al mattino prima che vengano effettuati forti attingimenti d'acqua.

I valori delle altezze di livello freatiche riportati nelle Tabelle che seguono sono riferiti al livello medio del mare.

**GENNAIO 1930**

### Osservazioni freatimetriche in destra di Po.
