# ANNALI IDROLOGICI

= 1930 =

Parte I. — OSSERVAZIONI

ROMA  
PROVVEDITORATO GENERALE DELLO STATO  
LIBBRIA  
1931 - ANNO IX.

## ERRATA CORRIGE

---

ANNALI IDROLOGICI 1928 - PARTE I. — **PO - Stazione di Roncocrete** (pagine 240, 276 e 312).

Le altezze idrometriche per il periodo dal 30 Luglio al 1. Settembre inclusi, indicate come positive, sono invece negative; in relazione, anche le portate medie giornaliere del periodo stesso dovranno essere corrette in base alla Scala di portata della stazione ( $Q = 42 H^2 + 421 H + 600$ , per  $H$  fino a m. 3).

Id.

Id.

**PO - Stazione di Cremona** (pag. 332).

L'altezza idrometrica media mensile, di Dicembre indicata in — m. 0.88, deve essere rettificata in — m. 0.54.

Id.

Id.

**PO - Stazione di Ostiglia** (pag. 333).

L'altezza idrometrica giornaliera del giorno 3 Dicembre indicata in m. 0.90, deve essere rettificata in m. 1.90.

# PREFAZIONE

---

Il presente volume contiene gli elementi di osservazione raccolti nell'anno 1930 dalla Sezione di Parma dell'Ufficio Idrografico del Po e riferentisi al corso principale del fiume ed ai bacini del versante appenninico dalla Scrivia al mare.

Altri due separati volumi raccolgono gli analoghi elementi distintamente per il versante alpino a sinistra della Sesia (Sezione distaccata di Milano) e per quello alpino ed appenninico a monte dello sbocco della Scrivia (Sezione distaccata di Torino).

Di norma, ogni elaborazione degli elementi raccolti è esclusa dal presente volume, e verrà compresa nel corrispondente volume della Parte II. degli Annali; quì si sono solamente indicate alcune prime e più elementari elaborazioni (medie, scostamenti dalla normale, ecc.) che servono a rendere possibile la immediata utilizzazione dei dati raccolti anche prima che venga pubblicata la Parte II. che necessità di studio costringono a ritardare.

Pochissime modificazioni vennero introdotte nel volume, rispetto a quelli precedenti, e soltanto in quanto risultarono necessarie per ottenere una completa omogeneità con le corrispondenti pubblicazioni delle Sezioni Autonome Idrografiche.

*PARMA, Febbraio 1931 - IX.*

## a) METEOROLOGIA

### SEGNi CONVENZIONALI.

- » Mancano le osservazioni.  
[ ] Dato interpolato.  
? Dato incerto.

### ANNOTAZIONI.

Le temperature medie sono calcolate con la formola:  $\frac{t^8 + t_{\max} + t_{\min} + t^{24}}{4}$

e sono stampati rispettivamente in grassetto e in corsivo il valore massimo e minimo della temperatura media giornaliera nel mese.

La velocità del vento è indicata in gradi secondo la scala:

|                 |   |                           |          |
|-----------------|---|---------------------------|----------|
| 0 - Calma       | - | Velocità oraria . . . . . | Km. 0-7  |
| 1 - Debole      | - | » » . . . . .             | » 7-14   |
| 2 - Moderato    | - | » » . . . . .             | » 14-29  |
| 3 - Quasi forte | - | » » . . . . .             | » 29-36  |
| 4 - Forte       | - | » » . . . . .             | » 36-50  |
| 5 - Tempesta    | - | » » . . . . .             | » 50-83  |
| 6 - Uragano     | - | » » . . . . .             | » 83-108 |

Le osservazioni pluviometriche, espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono pioggia e neve fusa. — Le quantità di pioggia segnate in grassetto sono le massime giornaliere.

Nella colonna « strato di neve » viene segnata l'altezza dello strato nevoso sul suolo alla fine del mese.

Sono indicati come giorni piovosi quelli nei quali la precipitazione è stata uguale o superiore ad un millimetro.

---
