|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |

## b) POTAMOLOGIA

---

### SEGNi CONVENZIONALI.

- » Mancano le osservazioni.
- [ ] Dato interpolato.
- f Dato incerto.

### ANNOTAZIONI.

I valori di piena e di magra ordinaria sono calcolati, per ciascuna serie idrometrica, dalla data di inizio delle osservazioni a tutto l'anno 1928, basandosi sul criterio di frequenza, ed ammettendo come ordinarietà dell'evento la frequenza del 75 per cento.

Le osservazioni idrometriche e quelle di torbida e temperatura delle acque sono effettuate alle ore 12 o ricavate per quell'ora dai diagrammi degli idrometrografi.

Il segno \*\* indica la massima altezza idrometrica.

id. \* id. minima id. id.

Le temperature diurne dell'aria sono date come media delle temperature massima e minima del giorno.

Le medie di riferimento indicate come aventi per origine l'anno 1901 sono tali per le osservazioni idrometriche iniziate in quell'anno o anteriormente: in tutti gli altri casi si riferiscono al periodo che ha origine con l'anno indicato nella testata per l'inizio delle osservazioni.

L'Ufficio (Sezione di Parma) raccoglie e conserva anche i dati inerenti agli idrometri di cui all'elenco riportato nella pagina seguente:

| N. d'ordine | Denominazione dell'idrometro | Giurisdizione idraulica | Inizio delle osservazioni | Natura delle osservazioni | N. d'ordine                 | Denominazione dell'idrometro | Giurisdizione idraulica | Inizio delle osservazioni | Natura delle osservazioni | N. d'ordine             | Denominazione dell'idrometro | Giurisdizione idraulica | Inizio delle osservazioni | Natura delle osservazioni |

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncocrete situato Km. 2.5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncofreente situato Km. 2,5 a monte.

(\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncocorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncocrecente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roucoorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiori.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Rocconcorrente situato Km. 2,5 a monte.

(\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roaccorrente situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.

Luglio 1930

(\*) Le altezze idrometriche sono rilevate all'apparecchio registratore di Borgoforte avente lo zero alla quota di m. 14.60 e collocato a pelo contemporaneo con l'idrometro di Roncoforte situato Km. 2,5 a monte.  
 (\*\*) L'idrometro di Revere sostituisce quello di Ostiglia, ora abbandonato, senza sensibili variazioni trovandosi sull'opposta sponda quasi nella stessa Sezione e con quota dello zero di pochi centimetri inferiore.
